Art Unit: 1724

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. "APPARATUS AND" should be deleted from the title.

Claim 19 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 19 "the head of air" lacks clear antecedent basis.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 19-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Overy 4,966,962 in view of Hellenbrand et al. 5,096,596. Overy disclose (see col. 2 line 67 through col. 5 line 66) a method of aeration in an oxidizing filter system substantially as claimed. The claims differ from Overy by reciting steps for injecting air into an upper portion of the filter tank, and injecting unfiltered water into a head of air in the upper portion of the filter tank. Hellenbrand et al. disclose (see col. 2 line 55 through col. 5 line 15) that it is known in the art to aerate water by injecting unfiltered water into a head of air in a aeration tank having a bed of material. It would have been obvious to one in the art to modify the method of Overy by utilizing the recited injecting steps in view of the teachings of Hellenbrand et al., to aid in aerating the unfiltered water. The specific basis for injecting the air, would have been an obvious matter of process optimization to one skilled in the art, depending on the specific water

treated and results desired, absent a sufficient showing of unexpected results. With regard to claims 26-28, it is submitted that Overy as applied above appears to teach the venting of air from the filter tank when the water level in the tank drops below a predetermined level.

Claim 19 properly written to overcome the above 35 USC 112 rejection and to include method steps for using the filter for oxidizing and removing impurities from water as recited in claim 1 of the parent application U.S. Patent 6,627,070, would be allowable.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter A. Hruskoci whose telephone number is (571) 272-1160. The examiner can normally be reached on Monday through Friday from 6:30AM-4:00PM.
